

USER INTERFACE REQUIREMENTS (FOR THE CLIENTS)

A panel like boxes which shows all the available flights which can be booked précising their destination and prices

When you click on a particular flight a pop up should appear which shows all descriptions of the flight such as: departure/arrival date and time, the flight category (first class, second class), price alongside two buttons one to exit and another to pay

When the pay button is clicked the user is taken to another site which shows spaces where he will fill his name, address, phone number, e mail address and three buttons showing his payment choice:

PayPal, visa-card, Orange Money, Mobile Money

When the user selects his choice of payment, he enters his credentials for the selected choice and payment is complete, he/she is redirected back to the welcome page and a message is sent to his email

USER INTERFACE REQUIREMENTS FOR THE PLATFORM OWNERS

A welcome page is placed requesting the administrator to log in

Then when the admin logs in there are three main things he can do

He can select create flight which takes him to the page for creating flights

He can view all the flights that have been bought already

He can delete a flight
